AUTUMN LIST

OF

Anemone & Ranunculus

SPECIALLY PREPARED AUSTRALIAN GROWN BULBS

Anemone, St. Brigid "Claremont" Re-selected Strain. (Natural Reproduction.)

STINTON & SON

The Claremont Nurseries

Telephone : Geelong 1594

GEELONG, VICTORIA

A field of Anemones in full bloom in our Claremont Nurseries, under the constant care of the "Claremont" Bulb Specialists.

Nursery Fresh !

"Claremont" Specialists test and select the stock plants from which the famous "Claremont" strains are built. Every step in the selecting, growing, maturing, packaging and delivery of the "Claremont" bulbs comes under the exacting standards which have made the "Claremont" strains

Specimen Flower of "Claremont"
Re-selected St. Brigid Anemone.

famous. That is how purity, quality and freshness are so well safeguarded — why the bulbs reach you in such a fresh and virile condition. In your garden, or used as cut flowers in your home decoration schemes, you will note the difference in quality and appearance at once.

REMEMBER.—"Claremont" Anemones and Ranunculi are genuine only in our own printed and sealed bags. We have no agents anywhere. Look for the name—STINTON & SON. The name on the bag guarantees the uniform high quality of "Claremont" Bulbs.

Anemone—St. Brigid

SPECIAL MIXED.

The True Irish Strain

This beautiful strain, raised originally in Ireland, has been re-selected by us for several years, and now contains all the largest and best forms and most delicate and brilliant colors in cultivation. We cannot speak too highly of this line, which is very much superior to any strains of Anemones which we have yet sent out.

We Offer an Excellent Assortment of Small Bulbs of Local Raising

Anemone

ANEMONE ST. BRIGID IMPROVED "CLAREMONT" STRAIN.

It has long been the wish of all who admire the Anemone, to see the rich and glorious colorings of the true St. Brigid strain incorporated with the hardiness, robustness, and long-flowering propensities of our re-selected Coronaria strain. We have been working up this wonderful strain for a number of years, and we are quite satisfied that we have a strain that is up to first-class standard. It has been greatly admired by all who have had the opportunity of seeing it at our Claremont grounds.

The flowers are extremely large, and the range of colors exceptional; the strain is exceptionally hardy and vigorous, and will succeed under ordinary garden conditions quite as well as the Anemone Coronaria.

12—3/-; 100—20/-.

ANEMONE ST. BRIGID—BRIGHT SCARLET.

This strain comprises true St. Brigid type, 95 per cent. of bright scarlet color, many of which are beautifully zoned and fimbriated.

12—2/6; 100—15/-.

ANEMONE "CLAREMONT"—CHOICEST DOUBLE-FLOWERED STRAIN.

This strain is very hardy and of exceptionally strong growth, and most prolific in flowering. The flowers are of large size, double, and borne on long stiff stems. A very wide range of choice rich colorings and a good percentage of beautifully zoned types make the strain a very desirable acquisition.

12—2/-; 25—3/6; 50—6/6; 100—12/-.

ANEMONE ST. BRIGID, "CLAREMONT" SPECIAL RE-SELECTED STRAIN. DOUBLE CROWN TYPE.

This is our strain "par excellence." Raised originally in Ireland, it has been carefully re-selected by us for several years, and now contains all the largest and best forms, and the most delicate and brilliant colors in cultivation. This strain stands without a peer, and either for garden display or exhibition purposes cannot be excelled.

12—2/-; 25—3/6; 50—6/6; 100—12/-.

ANEMONE ST. BRIGID—CHOICE MIXED.

Remarkable for their immense size, great variation of color, and the marvellous manner in which they flower. Every shade of color will be found among them, and the effect of a bed of these is simply gorgeous. For cutting nothing can equal them, as they last a fortnight or more in water, and owing to their coloring will make the most cheerless of rooms bright.

12—1/6; 25—2/6; 50—4/-; 100—7/-.

ANEMONE CORONARIA (GIGANTIC SINGLE POPPY-FLOWERED VARIETY)—CHOICEST MIXED.

This variety is very hardy, and will flower prolifically all through the season. For freedom of bloom and brilliancy of color there is nothing in the whole family to equal these plants. Flowers are from three inches to five inches across.

12—1/-; 25—1/6; 50—3/-; 100—5/-.

Ranunculus

RANUNCULUS, GIANT FRENCH. "CLAREMONT" CHOICEST EXHIBITION STRAIN (DOUBLE TYPE)—SUPERGRADE MIXTURE.

This superior strain of Ranunculus is suitable in all respects to be cultivated by the side of our celebrated "Claremont" Anemones. The flowers are double, of immense size, and combine every possible shade of color peculiar to this interesting and easily-cultivated flower.

12—2/-; 25—3/6; 50—6/6; 100—12/-.

RANUNCULUS, GIANT FRENCH. TANGO HYBRIDS.

This superb new strain marks a fresh era in the development of Ranunculus culture. The predominating colors are bright golden yellow, vermilion, terra-cotta and maroon. The plants are vigorous, throwing up a profusion of double flowers on long, erect stalks, which provide excellent material for cutting, and are unsurpassable for table decoration.

12—2/-; 25—3/6; 50—6/6; 100—12/-.

RANUNCULUS, GIANT FRENCH—CHOICE MIXED.

This strain is of robust habit and very free-flowering, and is of great value for garden decoration and cutting purposes. The flowers are of good size and substance, and embrace a wide range of choice colors.

12—1/6; 25—2/6; 50—4/-; 100—7/-.

NOTE.—The Anemones and Ranunculi as herein offered have been grown under our own personal supervision in our nurseries at Geelong. The bulbs have been raised by a special process which ensures a most prolific flowering period during the first season. Our bulbs are well and favorably known for quality and productiveness.

Hints on the Growing of Anemone and Ranunculus

OUR strains of hardy *Anemone* and *Ranunculus* will grow well in any part of the open garden, but where the soil is heavy and badly drained, with excessive atmospheric moisture during the winter months, we cannot advise planting until the beds in which the bulbs are to be planted have been thoroughly drained underground. It is not cold, but wet, which injures *Anemone* and *Ranunculus*. The undoubted cause of most cultural troubles is badly-drained ground.

Almost any soil is suitable, but it is a good plan to add a liberal dressing of well-rotted cow-dung and have it thoroughly incorporated with the soil in which the bulbs are to be planted. If the ground remains sodden long after rain has fallen, it may be concluded that it is badly drained. In such positions the ground should be underground drained, and the surface of the bed raised three or four inches above the general level. If good rotten cow-dung is not obtainable, a light application of blood and bone manure will give good results. Sandy soils are much improved by incorporating farm-yard manure and decayed humus from the garden refuse heap; but these should be fairly well rotted, as it is a mistake to overfeed *Anemone* and *Ranunculus*. Blood and bone meal is an excellent fertiliser, and is mild in action.

From the beginning of March until the middle of May is the best time to plant, though successful results can be achieved with bulbs planted until the middle of July. Frequent hoeing for the purpose of soil aeration and keeping weeds down is strongly recommended as a cultural point too often neglected. In the early spring a light dressing of sulphate of ammonia for *Anemone* and nitrate of soda for *Ranunculus* is very beneficial. This should be applied at the rate of 1 oz. to the square yard, and should be watered over the plants in a liquid form. On no account allow it to be dusted dry over the foliage.

Insects Pests to which Anemone and Ranunculus are Liable

GREEN FLY is sometimes troublesome, and must be kept in check, or great damage will be done to the plants. Nicotine spray is the best remedy.

MITE.—These are very small, and cannot be seen without a lens. Though they are small, the effect of their presence on a bed of plants is disastrous. They attack the young growing points of the shoots, and feed upon the tender leaves, the under sides of which turn a rusty brown. If not dealt with in time, the growth is entirely stopped, and the plants are ruined for the season.

The first sign of mischief should be watched for, and any infested plant should at once be treated with a sulphur wash and the remaining plants should be fumigated with nicotine spray on three alternate nights.

Sulphur wash can be made by mixing 1 oz. of flour of sulphur in 4 oz. of soft soap, dissolving the mixture in 1½ gals. of hot water. Thoroughly saturate both the upper and under sides of the foliage of the infested plants at least three times at intervals of four or five days, until it is seen that healthy and perfect leaves are being formed. It is quite futile to apply only once.

"CLAREMONT" SUPER HYBRIDS

No. 5

(Award of Merit Nurserymen and Seedsmen's Association of Victoria)

Wins the Highest Award of Merit Obtainable in Victoria

This strain of Super Ranunculus consists of principally bronze colors shading to rich crimson, and was originated by Fredk. W. Stinton after five years of effort. The leading features of this magnificent new race of Ranunculus are:—

Extremely Robust Constitution
Flowers Borne on Long Stems

Superb Colours
Extra Long Flowering Period

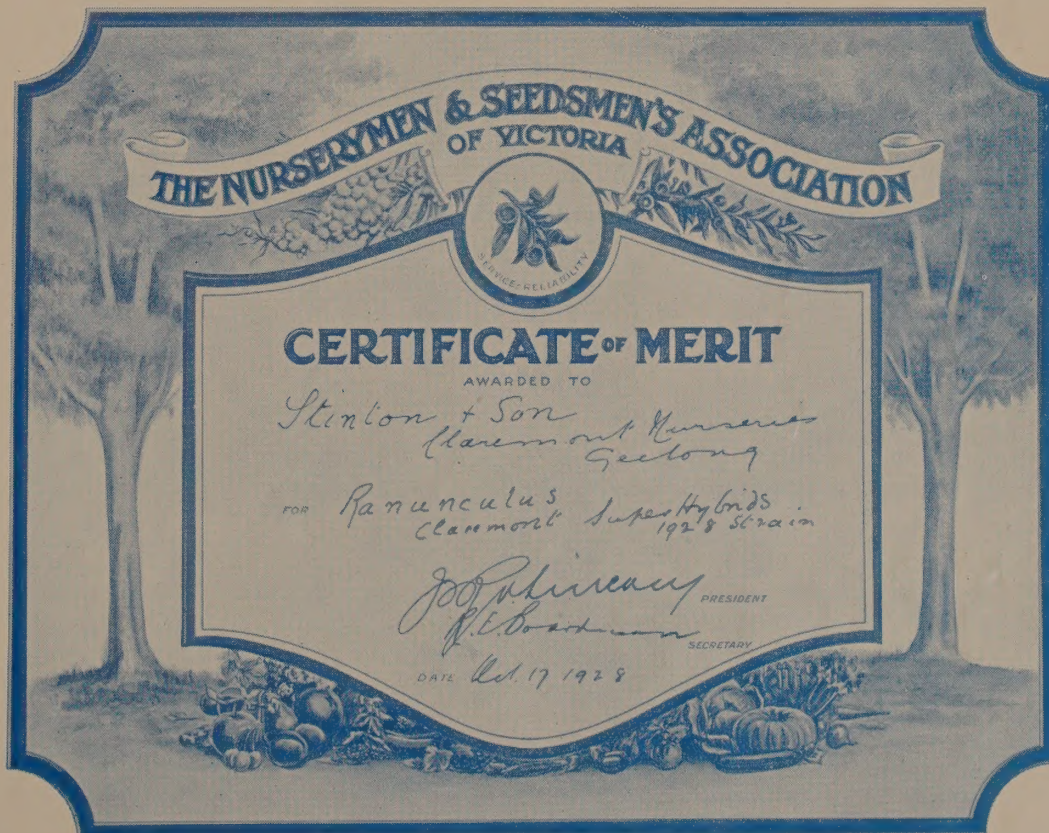

We are the largest growers and distributors of Anemone and Ranunculus in Australia.

Read the following extract from the "Garden Lover," November, 1928:—

The plants grow to a height of two feet, and give an abundant supply of gorgeous flowers on stiff, erect stems. The blooms are absolutely round, and measure four to five inches in diameter, with a depth of petal about two inches. Practically every popular color is represented in this strain, and an important feature is the elimination of all washy colors. Every bloom has a depth and richness of color which must be seen to be fully appreciated. This new strain will be confined to tango hybrids. There will be five new lines:—(1) Brilliant, light and dark reds; (2) yellows; (3) rose pinks; (4) salmon pinks; (5) mixed colors for utility purposes. (Twelve different shades of color will be obtainable in this selection.)

A committee from the Nurserymen and Seedsmen's Association of Victoria recently inspected these Ranunculus, and after recommending same for a Certificate of Merit, which was eventually granted, made the following comments: "We consider the new strain of Ranunculus, known as the Claremont Super Hybrids, to be the best we have yet seen for constitution of plant, harmony of color, form and size. All inferior quality and poor coloring have been carefully eliminated."

Claremont Super Hybrids, No. 5, will be ready for distribution next season, but orders should be booked now to ensure supplies from the limited stock that will be available.

FREEZIA

CHOICEST RE-SELECTED "CLAREMONT" HYBRIDS

Owing to their lasting qualities as cut flowers and their delicious fragrance, the Hybrids Freezias are a decided acquisition to spring-flowering bulbs. Our strain has now reached a very high degree of perfection and covers a wide range of tints of color hitherto unknown in Freezias. The flowers are yielded in profusion, and the wide range of colors embraces cream, bronze, cerise, mauve, orange, pink, purple, and yellow, and all the tints incidental to those colors. The bulbs can be thoroughly recommended.

12—2/6; 100—15/-.

Freezia being a corm like a Gladiolus, they thrive best in a sandy soil or heavy clay, but still flourish satisfactorily in soils between these two. They are very hardy, and require an open situation that is fully exposed to the sun the whole time. As the colored varieties are later in ripening than the others, their blooming period is consequently later, and so are usually at their best during late September and October—until when equinoctial gales are at their height—so some protection from these northerly winds is advisable.

Corms should be planted during the months of February, March, or April, and watered sparingly until there are sufficient roots and growth to require and absorb more. However, if insufficient water is given at the start, there is a possibility that growth may not start at all, and the corms will remain dormant the whole season.

Flowers last well when cut, but foliage and flowers cannot be cut and then expect to get first-class corms the following season. Great care should be exercised in cutting to leave sufficient growth on the plant to enable it to finish its work.

Winter Flowering Spencer Sweet Peas

Our Sweet Peas are well and favorably known, and are guaranteed to be of the genuine large flowered Spencer type.

All at 6d. per packet—12 packets for 5/6. Post free.

Albury Lavender—Lavender.
Albury Beauty—Orange salmon.
Aviator—Crimson scarlet
Asta Ohn—Lavender suffused mauve.
Biplane—Chocolate flaked on white background.
Blue Bird—Clear blue.
Charmeuse—Cerise.
Concord Charm—White tinted heliotrope.
Concord Countess Imp.—Flesh pink.
Concord Daybreak—Cream edged buff-pink.
Concord Deep Pink—Deep pink.
Concord Fascination—Cream flushed light heliotrope.
Concord Purple—A mauvy-purple.
Concord Radiance—Rosy cerise, very fine.
Daisy Motte—White, large.
Early Canary-bird—Rich deep cream or primrose.
Early Mauve Beauty—A pleasing shade of rosy mauve.
Early Princess—A lovely shade of soft lavender suffused mauve.
Fair Maid—Blush pink suffused salmon.
Flamingo—Standard bright orange, wings orange pink.
Glitters—Rich reddish-orange.
Glorious—Warm rosy-purple.
Grenadier—Brilliant scarlet, magnificent.
Kosciusko—Pure white, fine variety.

Lavender King—Deep lavender.
Laura—Purple maroon.
Malaitia—Scarlet.
Marie Cheslyn—Salmon pink on cream ground.
Madonna—Giant white.
Melrose Ruby—Crimson scarlet.
Miranda (F.C.C.)—Delicate pink.
Moonstone—Purple blue, blue wings.
Motts Purple—Distinct shade.
Motts Plum—Plum color.
Mrs. May Hassett—Pink suffused cream.
Niagara—Pale pink.
Patrobas—Light rose.
Pauline—Deep crimson.
Primrose—Cream.
Prince—Very deep blue.
Radiance—Beautiful rose color.
Red Prince—Carmine scarlet.
Salmonea—Rosy salmon.
Snowstorm Improved—Pure white.
Somerlayton—Crimson, non-burner, large.
Sunburst Improved—Rich salmon-pink with amber suffusion.
Thalia Motte—Large glowing crimson.
Versailles—Pale blue.
Veronique—Rose pink, large, prolific.
White Swan—Large pure white (extra).
Winsome—Lavender tinted pink.
Yarrowa—Deep rose pink.

Special "Claremont" Mixture of finest named varieties, 6d. and 1/- per packet.

Miscellaneous Bulbs

Daffodil (Trumpet), "Emperor"—Pale yellow outer petals and bright orange trumpet. 2/6 per doz.; 17/6 per 100.

Double "Golden Phoenix"—Rich yellow, with orange centre. 3d. each; 2/6 doz.

Daffodil Princeps. 1/3 per doz.; 6/- per 100.

Freezia, *Refracta Alba*—Very fragrant white flowers; strong growing and free flowering. 1/- doz.; 3/- 50; 5/- 100.

Grape Hyacinth (*Muscari*), "Heavenly Blue"—New and improved sort, very distinct and pretty, bright azure blue flowers. 2/6 doz.; 15/- 100.

Hyacinth—Choicest Mixed—Fine large bulbs. 9d. each; 7/6 doz.

Ixia, Viridiflora—Splendid sort, with vivid green flowers. 5/- doz.

Ixia, Mixed—Choice colors. 1/- doz.; 4/- 50; 7/6 100.

Jonquils, "Campernelle." 3d. each; 1/3 doz.

Jonquils, "Paper White." 1/6 doz.

Jonquils, "Soliel d'Or." 1/- doz.

Snowflakes (the True Giant variety). 3d. each; 2/- per doz.

Sternbergia Lutea (the Yellow Crocus). 9d. each; 7/6 per doz.

Tulips, Single Mixed. 5/- per doz.

VEGETABLE SEEDS

All Obtainable at 6d. Packet.

BROAD BEAN—Leviathan Long Pod—Exceedingly prolific, bearing long pods of eight to ten beans.	
BETT—Eclipse Turnip-rooted—Smooth round root, blood-red flesh, fine-grained and sweet.	
BROCCOLI—Walcaren—Hardy, large white compact heads.	
BRUSSELS SPROUTS—Dalkeith—Hardy, productive variety.	
CABBAGE—East Ham—Large, firm head, hardy.	
CABBAGE—Enfield Market—Useful for winter and summer use.	
CABBAGE—St. John's Day—Highly recommended for summer use.	
CARROT—Scarlet Short Horn—Matures early, good flavor.	
CAULIFLOWER—Early London—Early variety; good sort.	
CAULIFLOWER—Eclipse—Large solid heads, pure white.	
CRESS—Triple Curled—Useful and distinct variety.	
ENDIVE—Green Curled—Excellent salad variety.	
KOHL RABI—Turnip-rooted Cabbage.	
LETTUCE—Iceberg—Quick grower, hard, handsome heads.	
LEEK—Holborn Model—Finest variety in cultivation.	
MUSTARD—Finest White—A pungent salad.	
ONION—Brown Spanish—Early and productive variety.	
PARSNIP—Hollow Crown—Old standard and popular variety.	
PARSLEY—Triple Curled—Fine curled, good quality.	
PEAS—Yorkshire Hero—Good flavor; abundant bearer.	
PEAS—Stratagem—Heavy cropper; excellent flavor.	
RADISH—Turnip-rooted Mixed—Well-known variety.	
RADISH—Long Scarlet—Good sort.	
SPINACH—Round or Summer—Good standard variety.	
SALSIFY—Long White Mammoth Sandwich Island.	
TURNIP—Early White Stone—Large white variety, somewhat flattened bulb.
